

PENTAHEXAFLEXAGON VARIATION 1/1

Once cut out, pre crease all triangles back and forth. Glue the backside below such that the reverse side of the C_6 triangle is behind the B_6 triangle and the C_1 triangle is behind the D_1 triangle. Once glued, crease the triangles again and fold together the three pairs of Es. You will have a pattern as for a tetrahexaflexagon. Fold together the three pairs of D triangles. Now fold the two pairs of C triangles and the last two C triangles will be placed on top of each other from the two ends of the paper model. Now A_1 will fold over the outside of the flexagon and can be pasted onto the plain white back of Triangle D_6 . All the As should be on one face of the completed flexagon and the flexagon will have a uniform thickness of 2 sheets of paper. This is the last hexaflexagon with only one variation.
